University Projects

Chat-Bot:

Skills: JAVA; JDBC

Chat-bot is a software that is developed in Java Platform to run in any OS windows or IOS. The task was to open any website directly without requiring to open any browser, can keep track of important files and folder that is saved in the computer without requiring to search through all the drives and folders. All that is need is to save the location of the file once. JDBC has been implemented for later development in the project to chat internally with the colleagues.

Bank Management System:

Skills : ORACLE, MySQL

Designed a Basic Bank Management systems which works as any normal management system Using Oracle Database.

National Database System:

Skills : C#: MySQL

This Software is currently on the process of development. The Goal for this software to enter almost every possible detail of a person from different source with appropriate permissions to read and write the data goes through different security measurement so that manipulating the data would be hard for anyone. And any people can be traced through his id, car number or license number also using the

job id as well for immediate identification and retrieval information of the person. For future development Retina and fingerprint scanner will also be added for further security reasons.

Other Basic projects:

Tic Tac Toe in C# and android, Calculator for android,
